PRODUCT UPDATE FROM THE GLOBAL PAINT COMPANY

NEW HYDROLUX WATERBASED PAINT IS HERE!

As more and more countries adopt VOC emission restrictions, waterborne basecoat systems have become the new keyword in the industry.

ChemSpec have been hard at work on their new Hydrolux basecoat system for the past couple of years, having pre-empted the trend towards this technology. By entering the market slightly later than their competitors, they have been able to add several breakthrough new technologies into the Hydrolux toners. These new ingredients have eradicated some of the problems that have plagued other waterbased brands such as short shelf-life, temperature sensitivity and the inability of toners to be exposed to sub-zero temperatures during storage or transportation.

The actual process and performance in its application and daily use will require almost no change at all for any bodyshop repair centre

to convert to. The new product, is also fully compatible with the Metalux 2 Range and by using 90% less solvent, Hydrolux also helps in cycle times, for it results in fewer application coats being needed for full cover to gain outstanding results.

The system comprises 67 basecoat toners and is capable of matching over 140,000 international colours as you would expect of such a premium quality waterbased product. It is launched with a 4-Life paint warranty package for ultimate peace of mind for system users in the long term.

The exceptional value of Hydrolux delivers a cost to the end user of approximately half of that of many of the major international competitors and that's really shaken up some traditional world markets in a big way. And this coupled to its ease of use and wet look final finish has contributed in Hydrolux selling beyond Chemspec's wildest expectations.

NEW SWATCHES FOR AUS/NZ CARS

PRODUCT UPDATE FROM THE GLOBAL PAINT COMPANY

METALUX 2 are proud to launch the new range of NZ / Australian car colour swatches.

The swatches will be added to the Professional Colour Selector, the world's largest colour tool which features over 12,000 actual paint swatches.

Chemspec has taken into account the most popular local NZ and Australian manufacturer colours and have produced eight new fandecks. Manufacturers include Ford Australia, GM Holden, Mitsubishi Australia and Toyota Australia.

The swatches have also been fully integrated with the class-leading EasiMix Professional Software and updates for these are available on www.easimix.co.za.

NEW BLACKER THAN BLACK!

PRODUCT UPDATE FROM THE GLOBAL PAINT COMPANY

Chemspec adds superb Deep Black toner to Metalux 2 range.

METALUX 2, the flagship automotive refinish range from Chemspec, has added a brand new Deep Black basecoat toner (9300) to the already extensive range of toners that is like no other on the market.

This extremely deep black toner has a strong blue undertone which gives it the "blacker than black" look that many new cars are being released with. It can be used with other toners on the Metalux 2 mixing bank.

"We have achieved a very strong colour which is richer and bluer than most of our competitors," says Chemspec Technical Director, Ralton Bentley.

Metalux 2 products are reliable and offer the best value money can buy. Being a premium refinish range, in the same league as other leading international brands, you would expect this system to cost an unearthly amount. The good news is that by switching to Metalux 2 you end up

paying half of what you would normally spend on other premium systems without compromising quality, ease-of-use or performance.

"We have achieved a very strong colour which is richer and bluer than most of our competitors"

Metalux 2 is also backed by the 4 LIFE Warranty so your customers will have ultimate peace of mind that their vehicles are in good hands. Don't waste any more money on over-priced systems that dent your pocket to the point where it affects your profit. Don't compromise quality and settle for inferior cheaper systems. Metalux 2 is the balance you've been looking for.

The new Metalux 2 Deep Black toner is already available in store. For more information about Metalux 2 visit www.smitsgroup.co.nz

SAVE TIME & MONEY WITH NEW DTM TECHNOLOGY

PRODUCT UPDATE FROM THE GLOBAL PAINT COMPANY

Say goodbye to etch and wash primers - say hello to Metalux 2 DTM

Bring speed back into your workshop with Chemspec's latest breakthrough direct to metal primer (DTM). DTM is an epoxy modified primer system and is isocyanate free. With its excellent anti-corrosion properties it sticks beautifully to aluminium and steel.

"The development of Metalux 2 DTM is yet another reason why we're getting people to convert from over-priced refinish systems to Metalux 2."

DTM is the magic tool when your bodyshop is feeling the pressure of too many jobs and too little time. By using DTM, you're completely cutting out the intermediary stage of etch or wash priming which inevitably accelerates turn-around time of repair jobs. In fact, you can save up to 1 hour per job with DTM.

You can now prime bare metal surfaces without any pre-treatments. DTM is better than traditional epoxy primers due to its fast sanding properties.

It is fully compliant with USA VOC legislation and can be applied to steel, aluminium and galvanised steel. DTM gives a high film build and provides optimum adhesion and excellent corrosion protection on bare metal and OEM surfaces.

The development of Metalux 2 DTM is yet another reason why we're getting people to convert from over-priced refinish systems to Metalux 2.

Competing in the same league as other top brands, this premium refinish system offers you a whole range from primers, basecoats, clearcoats, hardeners and accessories that deliver superior performance in any climate.

Metalux 2 is backed by the 4 LIFE lifetime warranty giving you ultimate peace of mind. So, if productivity, profitability and value for money are what you're looking for, isn't it time to switch to Metalux 2?

GLOBAL PAINT COMPANY

NEW COLOURED PRIMERS FOR METALUX 2

PRODUCT UPDATE FROM THE GLOBAL PAINT COMPANY

Chemspec is excited to announce another fantastic innovation within their Metalux 2 range - the launch of six new coloured primers that can be mixed together to make almost any colour in the spectrum. These colours are white, black, red, yellow, blue and green.

Car manufacturers often use pigmented primers in production, where the primed surface is not top coated (inside bonnets etc.). The new Metalux 2 coloured primers are therefore perfect for refinishing these surfaces, as an exact match can easily be achieved, whilst retaining the integrity of the original finish.

The new primers feature exceptional performance with easy sanding and fantastic adhesion to a variety of surfaces. Rest assured that we have left no stone unturned when it comes to easy reference.

We have created a swatch book with over 100 colours which all cross-reference to a colour formulation on EasiMix. So, the process is simple: flick through the swatch book, choose a colour, punch the code into EasiMix, weigh it and spray it.

What's more is that these primers can also be used by themselves if so desired. They are completely compatible with all other 2K HS filler primers in the Metalux 2 range and can be applied wet-on-wet to achieve faster throughput. With quality like this, don't you think it's time to reap the benefits?

NEW POLYPROP FILLER PRIMER FROM METALUX 2

PRODUCT UPDATE FROM THE GLOBAL PAINT COMPANY

Eliminating the recoating window period for plastic primers.

Chemspec is proud to announce the launch of a dynamic new Polyprop Filler Primer that will change the way you look at plastic primers.

Ordinary polyprop primers are an adhesion promoter for plastic surfaces. However, the problem many spray painters have with this type of product is that they have a window period in which the surface has to be recoated with a normal Filler Primer before being sprayed with either 2K enamel or basecoat after 10 minutes but within 45 minutes.

"The new Polyprop Filler Primer performs similarly to conventional primers and allows either wet-on-wet overcoating or overcoating after air-dry or oven curing. It also boasts excellent filling properties."

The new Metalux 2 Polyprop Filler Primer excels here as it has been designed to eliminate the 45 minute window period giving the spray painter

more leeway in the workshop. The new Polyprop Filler Primer performs similarly to conventional primers and allows either wet-on-wet overcoating or overcoating after air-dry or oven curing. It is also easy to sand once dry, but this is seldomly necessary due to the exceptional sprayability.

The product offers excellent filling meaning that no additional priming is necessary, thereby also saving you time.

The new Polyprop Filler Primer forms part of the complete Metalux 2 automotive refinish system. Metalux 2 offers you the same quality and performance as other leading premium systems on the market at half the cost.

For more information about the Metalux 2 system visit www.smitsgroup.co.nz

NEW 2K POLAR HARDENER FROM METALUX 2

PRODUCT UPDATE FROM THE GLOBAL PAINT COMPANY

Any bodyshop owner knows that productivity means profitability. Chemspec's flagship refinish range, Metalux 2, is becoming more and more popular with bodyshops all over the world who want to improve in-house productivity and value for customers' money.

Chemspec is pleased to announce the latest addition to the Metalux 2 Normal Hardener range. The new 2K Polar Hardener from Metalux 2 is based on new technology, high performance isocyanates which result in very fast curing, even in cold conditions.

This means that production time is faster on small repairs where drying outside the booth is preferred. Its excellent gloss and flow are further advantages that make this products a must-have for every bodyshop.

The Metalux2 normal hardener range also features the following hardener speeds: Express, Fast,

Medium and Slow for all possible applications.

Whether you're just doing a spot repair or respraying an entire vehicle, Metalux 2 has a hardener that is perfect for the job.

"The new 2K Polar Hardener from Metalux 2 is based on new technology, high performance isocyanates which result in very fast curing, even in cold conditions."

Metalux 2 also features a range of accessories such as matting, anti-silicone solution, accelerator and degreaser.

Chemspec, the global paint company, manufactures a vast range of high technology industrial, decorative and automotive paint systems. The company is listed on the JSE AltX.

GLOBAL PAINT COMPANY

NEW DEGREASER NOW AVAILABLE

PRODUCT UPDATE FROM THE GLOBAL PAINT COMPANY

Chemspec is proud to announce the launch of a new degreaser to be added to the Metalux 2 range, PrepWipe.

PrepWipe is more efficient and offers better performance than its predecessor; PreKleen. With a slower evaporation time, PrepWipe offers the spray painter more time to degrease surfaces properly.

According to Chemspec Technical Director, Ralton Bentley, the decision to develop and produce a more efficient degreaser was taken at a recent international conference. "It was clear to us that there exists a gap in the market for a degreaser that offers the spray painter a little more time to do the job properly," he says.

PrepWipe is now available. For more information visit www.smitsgroup.co.nz
