DESIGN YOUR ULTIMATE DREAM VEHICLE

Digital PAINTBOOTH

PAINT YOUR CAR DIGITALLY ON YOUR COMPUTER SCREEN **v3.252**

One of the most important and expensive customisations you can do to your ride is a good paint job. But it is often hard to imagine what a particular colour will look like or if your car would look better with a graphic or two. House of Kolor's Digital Paint Booth has taken the guess work out of creating the design you want. This software allows you to paint your car digitally on your computer screen. The possibilities are endless as you control the graphic colour, position, size, and rotation. If that's not enough you can use the draw tool and create what ever you can dream up! Using this software you can make sure that you will be getting the design you want. Let the computer screen be your spray gun and masking tape! Now, you can view that car or bike you have been dreaming about finished, before you even prime or sand it.

PAINT: The easiest customisation you can create on your vehicle is to change the colour. A variety of House of Kolor paints have been provided. Once you have loaded the software on to your hard drive, the first step to getting started is choosing a colour for your vehicle.

DRAWING: This software not only allows you to add pre-selected graphics to your vehicle, you can also create your own graphic designs. By using the draw section, you can create a brand new design or add to graphics already on the vehicle. You can decide which brush size you need and whether you want to draw on top of other graphics or underneath them. In addition, you can turn your hand drawn graphics on and off by using the show and hide buttons.

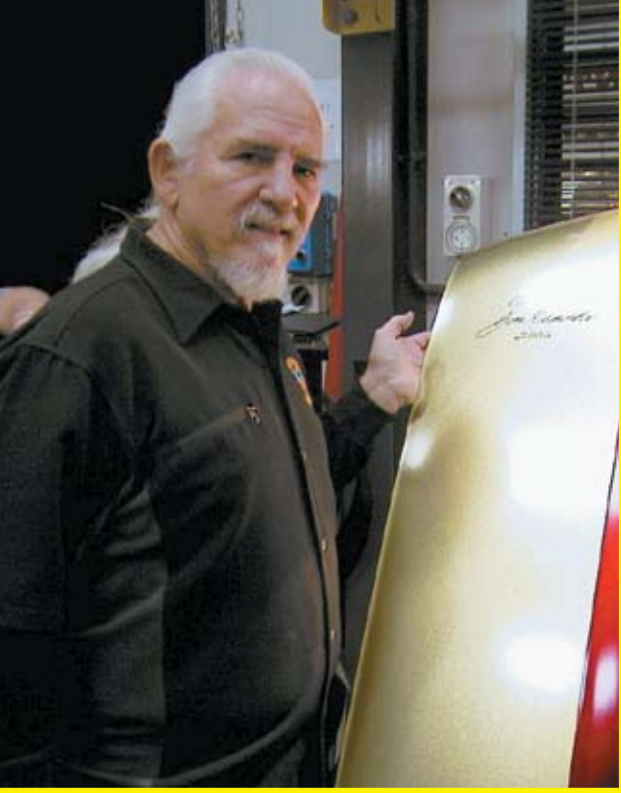

GRAPHICS: Once you have chosen the basic colour for your vehicle, graphics can be added. This software enables you to preview complex paint designs with multiple layers of graphics. These graphics include flames, two tones, pinstripes, and other miscellaneous graphics. Once a graphic has been selected you can manipulate the size, rotation, and position of the graphic to create a limitless number of custom paint designs.

PRINT: Once you have created on screen the paint design you want, you can print it out. This feature not only allows you to show your friends but it also includes all the House of Kolor paints and other material that are needed to produce your design.

• CREATE TWO-TONES, FADES, ADD GRAPHICS OR DRAW YOUR OWN

• CHANGE THE COLOUR OF YOUR RIDE AS QUICKLY AS YOU CAN CLICK YOUR MOUSE

• CONTROL GRAPHIC COLOUR, POSITION, SIZE & ROTATION

HOUSE OF KOLOR

Welcome to House of Kolor® – Celebrating 53 Years of Quality Kustom Finishes! This is an exciting time for the industry and for our company. As the only true custom paint system designed from the ground up, we never compromise on performance and still provide great value from our products. After 53 years of experience in the custom painting field, we have learned three critical truths:

"A chain is only as strong as its weakest link. By incorporating normal refinish products into the House of Kolor® system, you will weaken the entire chain."

"Many custom paint jobs require up to 15 mils of film thickness, unlike refinish work that is designed for 7 mils. This thicker film build places extreme demands on each component of the system."

"The paint materials are only about 25% of the overall cost of a custom paint job, so using lower quality products becomes a very costly mistake in the long-run."

After all these years, you can still pick out a House of Kolor® project. Our colours are richer and brighter than all the competitors, and the different layers blend together like no paint you've ever seen. Plus, you will not see the longer-term defects that other paints frequently experience.

Developed for custom painters by the kustom painter Jon Kosmoski, our values run as deep as the colour in our finishes.

JON'S VISION

"Before House of Kolor®, painters who were willing to put in the time and effort could achieve only a minimal number of colours and effects. Some of us wouldn't settle for 'good enough.' I believed that the custom painter's hard work should be rewarded with a long-lasting and durable product, which drove me to create a custom paint system specifically for custom painters. Because the system could only be as strong as its weakest link, I designed every single product to be the best for its application. The result is a system that works together and achieves the performance requirements of the world's most demanding finishes. House of Kolor® brand primers, colours, effects, and clears bring out the best in each and every painter when used properly as a system. In fact, House of Kolor® products are also easier and quicker to spray than other paints, with far better results. You don't need to have a complicated paint scheme to realise the benefits of House of Kolor®, but they sure are fun to look at!"

BEFORE YOU PAINT...

Planning is the key to a show-quality paint job. You've got to think about each component, how you're going to lay down each coat, how the colours will work together, and always check the technical guidelines! When you stick with the House of Kolor® kustom paint system, we do most of the work for you, so the application goes smoothly and the quality lasts for the long term. Here's all the basics you need to know:

- Use our heavy-duty, kustom grade epoxy primers! You're entering the world of high-build kustom painting, and even the best refinish primer can't stand up to the challenge. House of Kolor® primers are the foundation of a high-build kustom paint job. If you've already primed the surface with something else, sand it off and re-prime it with House of Kolor®. When all is said and done, you'll be glad you did. By the way, our primers are direct to metal, plastics and fibreglass - for all custom painting applications.
- For maximum adhesion between primer and basecoat, use the House of Kolor® coloured sealers (Ko-Seal® II)! These rugged products not only add years to your paint job, but they give you three colour options to reduce the amount of basecoat required for coverage. Use the white, black, or metallic silver sealer, or tint the metallic silver or white with kandy concentrate to approximate any basecoat.
- Use House of Kolor® topcoat clears – properly! House of Kolor® uses special solvents in our products – solvents that bite deep into the surrounding coats. Only House of Kolor® premium urethane clearcoats allow those solvents to bite into them, whereas competitors' clears do not achieve the adhesion with our solvents and will flake off (delaminate) quickly. Our UC35 and new UCC01 products provide a harder finish to provide stability and protection over the thicker colour coats. Our UFC35 and UFC19 product provide the maximum flow-out and user friendliness. For a flat (or matte) finish, try our new UMC35 Kos-Matte Klear!
- Interested in a Kandy Paint Job? Read our Section on the Kosmic Kandy System before visiting your jobber or painter!

AND ALWAYS...

- Don't be a hero - follow the House of Kolor® Application Recommendations! We want you to have the best finish possible, so if House of Kolor® recommends three coats of pearl with 75% overspray, then you should stick to that recommendation! Our technical manual is available for download at www.smitsgroup.co.nz. It's a great tool that's easy to follow, for worry-free painting!

U35 Kosmic Urethane Klear

PREPARATION & CLEANING

- Removes grease, wax, silicone, adhesives, tar, tree sap, insects and dirt.
- Quick flashing solvent designed for use over existing finishes and bare metal before sanding and body work.
- Removes sanding residue as well as dirt and light contaminants, such as hand oil.
- Eliminates static electricity that occurs during the working of substrates
- Designed for use after KC10 and after sanding.

WHY USE KUSTOM PRIMERS & SEALERS

The primer is the foundation of any custom paint job. Because of the unique chemistry of our epoxies, our primers offer:

- Direct to metal, plastics, and fibreglass.
- Extreme flexibility that allows the finish to expand and contract when the metal is heated or cooled, and will not crack even when seriously dented.
- Tenacious adhesion that resists chipping from rock bruising or door dings.
- Fills up to 24 P grit scratches and offers outstanding sandability.
- Complete blockage of body filler bleed-through at 2 mils of film build.
- Very high film build and easy sanding to improve productivity.

In custom painting, sealers will save you time and money, and should never be considered OPTIONAL! They perform four critical functions:

- Improve the adhesion between the substrate and the basecoat.
- Greatly improve the colour holdout of your finish.
- Tintable to reduce the amount of base needed to achieve full coverage.
- Prevent solvent absorption into the primer.

KWIKURE 2-PART EPOXY PRIMER/SURFACER (KP2CF- PARTS A & B)

- Designed to work over properly prepared bare aluminium, fibreglass, galvanized steel, OEM finishes and some woods and plastics.
- 2 coats cover 24 P grit scratches; 70% solid high build primer that remains extremely flexible.
- The easiest to sand prime available, wet or dry.
- Body filler can be applied under or over primer.

DIRECT TO METAL PRIMER (KD2000 & KDA2000)

- Low VOC Direct to Metal Epoxy.
- Designed to be applied to properly cleaned and sanded aluminium, steel, galvanized steel, OEM finishes, sand blasted steel, fibreglass and SMC.
- Tenacious adhesion to bare substrates.
- Quicker flash and dry times than KP2CF.

KO-SEAL® II PRIMER SEALER (KS SERIES)

- Improve the adhesion between the substrate and the basecoat.
- Greatly improve the colour holdout of your finish.
- Tintable to reduce the amount of base needed to achieve full coverage or even can be used as ground coats in some applications.
- Prevent solvent absorption into the primer.

SHIMRIN® UNIVERSAL BASES

'The bright building block for your flawless paint job'

Graphic Kolors are the high-performance solid colour range in the House of Kolor line-up. Featuring intense clean colour & great coverage – this product is created purely of 100% organic pigment. Mainly used as ground coats, but can be applied also as a topcoat for those looking for a powerful burst of solid colour. Available in 12 unique basecoat colours to satisfy your creative needs!

- Feature fast coverage, high pigmentation and low solids.
- Universal basecoat that may be simply cleared for a final finish or used as a basecoat with other Kandys or Pearls in the HOK range.
- Can be topcoated with either acrylic lacquer or urethane enamel.
- Designed to reduce paint build up.

DESIGNER PEARLS (PBC SERIES)

'Crisp clean pearls from any angle'

Designer Pearls come in the widest palette on the market - over 40 pearl colours in the range. Colour possibilities become endless, as Designer Pearls may be intermixed with other Shimrin's including the Neons, Graphic Kolors BC & FBC Metallic Basecoats and Kandy Basecoats to create a truly one-of-a-kind custom finish. Simple to apply with premium results achieved when Designer Pearls are applied over a white or tinted basecoat to create an intense pearl effect. Pearl mica pigments are extremely finely ground to create an optimal smooth finish. This also offers excellent usage for airbrushers due to a low film build.

- Endless colour possibilities – may be intermixed with other Shimrins including the Neons, Graphic Kolors & FB or FBC Metallic Basecoats.
- Clean flip from all angles.
- Universal basecoat that may be simply cleared for a final finish or used as a basecoat with other Kandys or other effects from the HOK range.

KANDY BASECOATS (KBC SERIES)

'Outstanding colour at every stage of your project!'

This is a specially developed basecoat that mimics the ever popular Kandy finish. Easy to use with a low film build, makes this basecoat suitable for street riders, especially being touch up friendly. Available in the same great 20 colours as Urethane Kandys to produce limitless variations of colour combinations.

- Feature fast coverage, high pigmentation and low solids.
- Application is reasonably simple and able to be touched up if required.
- Universal basecoat that may be simply cleared for a final finish or used as a basecoat with other Kandys or Pearls in the HOK range.

GLAMOUR & FINE METALLIC (BC & FBC SERIES)

'Versatile platform product that creates a world of endless colour'

Shimrin Metallic colour bases have a captivatingly rich colour. Versatile in that they can be used as basecoats beneath a Kandy application or simply clear over the top for a vibrant metallic finish. From this metallic platform colour possibilities become endless, as Shimrin Metallic Bases may be intermixed with other Shimrins including the Neons, Graphic Kolors and Designer Pearls to create a truly one-of-a-kind custom finish. All 12 colours are available in both fine & coarse grades to give you even more opportunity to create your own unique finish.

- Endless colour possibilities – may be intermixed with other Shimrins including the Neons, Graphic Kolors & Designer Pearls.
- Universal basecoat that may be simply cleared for a final finish or used as a basecoat with other Kandys.
- Simple application, good lay down, mottle free finish.

NEONS (NE SERIES)

'Eye-grabbing graphic impact'

Shimrin Neons are designed for hard-hitting high visual impact. Perfect for highlights on race cars, boats and signage where eye-catching intensity is craved. We recommend clearcoating with our HOK Urethane clear which contains much more UV absorbers than other standard clears – thus reducing possible sun fade.

- Shimrin Neons have a limited colour fastness in the direct sun, so an overall project in Neon is not recommended.
- Universal basecoat that may be simply cleared for a final finish or in graphics and artwork.

SHIMRIN® UNIVERSAL BASES - CON'T

METAJULS™ METALLIC BASES (MBC SERIES)

'Exceptional sparkle & brightness'

Shimrin Metajuls Metallic Bases are our most brilliant metallic basecoats that feature exceptional sparkle & brightness. You haven't seen sparkle until you get your hands on Metajuls Metallics! Used alone they are spectacular, but when teamed with Kandys – they really become magic! Add a complete new dimension to your project by working with Metajuls under our enormous palette of Kandys. Metajul Metallic bases may also be intermixed with other Shimrins including the Neons, Graphic Kolors and Designer Pearls making colour possibilities endless! Available in 4 colours and 3 flake particle sizes – fine, standard & coarse.

- Endless colour possibilities – may be intermixed with other Shimrins including the Neons, Graphic Kolors, Kandy Concentrates & Designer Pearls.
- Universal basecoat that may be simply cleared for a final finish or used as a basecoat with other Urethane Kandys.
- Exceptional sparkle that doesn't require multi-clear layers.

KAMELEON® KOLORS (KF SERIES)

'Revolutionary head-turner'

Kameleon Kolor is a revolutionary basecoat that has advanced the world of colour. Kameleon will actually change colour depending on what angle it is viewed. Rounded, curved surfaces & sharp angles will be highlighted by this unique formulation. Colour changes are broad too – from a medium green to a deep purple simply by moving your viewpoint a few feet. Available in 7 captivating colour combinations.

- Can be mixed with other PBC, KBC & Basecoats to give you a one off exotic finish.
- Great for graphics and artwork.

ARTISTIC BASES

KOSMIC KROME® (MC SERIES)

'Hard hitting metal look'

The Kosmic Krome effect has evolved from the development of revolutionary aluminium flake chemistry. The final result can be a beautiful and interesting finish that when combined with other HOK products transforms into an entirely different realm. Brushed aluminium effect can be applied to create a real metal finish – even on wood or plastic! Ideal for detailing of interior parts and available in 5 metal colour effects.

- Finished Kosmic Krome surfaces must be clearcoated – with either urethane enamel or acrylic lacquer.
- Unlimited options when topcoated with Kandys for a anodized look.

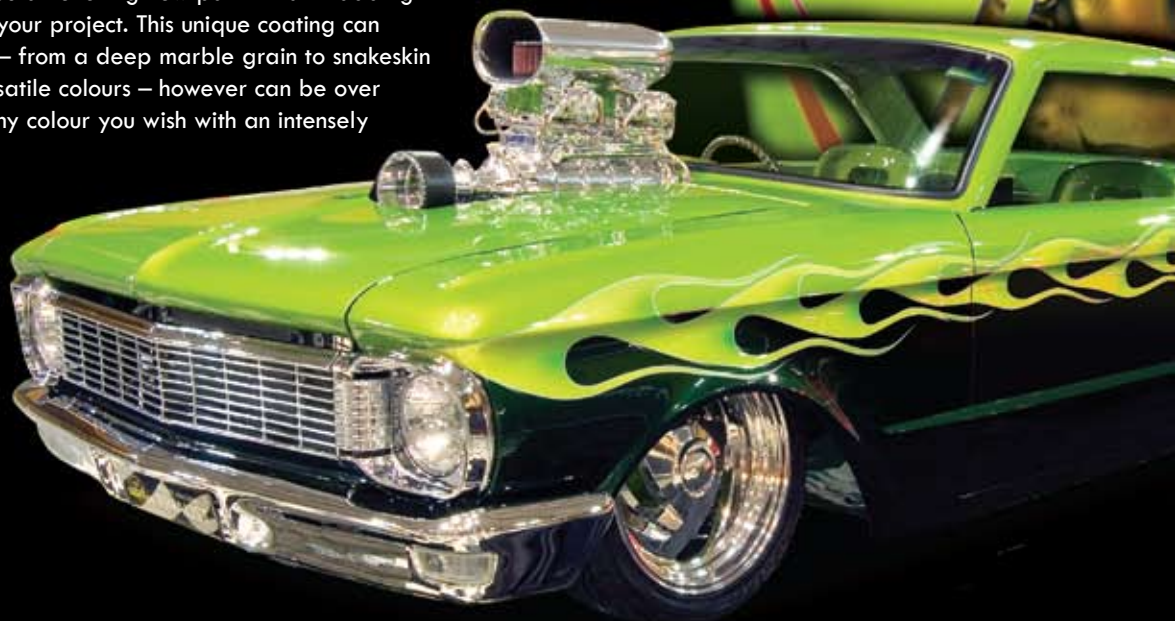

MARBLIZER® (MB SERIES)

'Creating out of this world finish with ease'

Marblizer Artistic Bases offer you an exciting new paint finish – adding incredible new visual depths to your project. This unique coating can create a wide range of effects – from a deep marble grain to snakeskin appearance. Available in 6 versatile colours – however can be over coated with Kandys to create any colour you wish with an intensely powerful effect.

- An unlimited world of effects are open to the innovative painter.
- Use 2 colours together to intensify the effect even further!
- Universal basecoat that may be simply cleared for a final finish or used as a basecoat under Kandys.

KOSMIC KOLOR® URETHANES

KOSMIC KOLOR® URETHANE KANDY'S (UK SERIES)

'The true Kandy effect – the first and the original Urethane Kandy'

Watch this colour explode off the panel taking your project to a dramatic new level. Being transparent enables limitless colour possibilities – magnifying any basecoat or flake that it is placed over. Our Kosmic Kolor Kandy is incomparable to any other Kandy on the market – no one can match our colour intensity or durability! It will also stand the test of time as development has lead our Urethane Kandy to be truly fade resistant. Available in an extensive range of 20 unique colours.

- Can be sprayed over the variety of Shimrins Bases including the Neons, Graphic Kolors, Kandy Basecoats, Designer Pearls & numerous flakes
- Use only Kosmic Reducers & catalyst with Kosmic Kandys to ensure longevity

KOSMIC KOLOR® URETHANE SOLID COLOURS (UB & UFB SERIES)

'Simple urethane single stage'

- Single stage urethane that can be flattened with FA01 for a great hot rod black.
- Available in black and red only.

KANDY KONCENTRATES INTENSIFIERS

KANDY KONCENTRATES (KK SERIES)

'For those that just can't get enough colour'

This specially designed product is solely for intensifying colour. If you are a colour junkie and just can't get enough, try adding a colour boost to our Kandys range. Speed up your spray process by tinting your bases and sealer. Strengthen Kandys for faster coverage on chassis, undercarriage, door jambs, engine bays, etc. Kandy Koncentrates will get you through the tough stuff fast by, saving time & material. Also a great product for airbrushing.

- Create a truly exotic colour by adding Koncentrate to one of our standard Kandy colours – giving you ultimate creative control!
- Perfect for motorcycles or small parts when speed is a factor.
- Great to use for touch-ups and blending.

TOPCOAT KLEARs

KOSMIC ACRYLIC URETHANE KLEAR (UC35)

- May be used to topcoat any Urethane enamel finish, including all Shimrin Basecoats.
- Dries fast and may be colour sanded and buffed the next day.
- Our preferred clear for first coat before flow coating.
- Preferred clear for motorcycles due to high acrylic content enabling faster cure time and better resistance to fuel spills.

KOSMIC URETHANE FLO-KLEAR (UFC35)

- Our premium clearcoat for that elite show car finish.
- Ultra high gloss consistently used for the top show cars world wide.
- Excellent flow out suitable for flow coating and over graphics and artwork.
- Good chemical, water and stone-bruise resistance.

KOSMIC ACRYLIC URETHANE KUSTOM KLEAR (UCC01)

- One of our newer clears for people looking for a faster curing product.
- May be used to topcoat any Urethane enamel finish, including all Shimrin Basecoats.
- Tough clearcoat, has ultra wet gloss, is resistant to gas spills and most racing fuels.
- Contains sunscreen agents to preserve colour below.
- Dries fast & can be buffed the following day.

KOSMIC KOLOR SUNSCREEN ACRYLIC LACQUER CLEAR (SC01)

- Designed to live in thick paint films common to custom painting
- One of the most chip resistant acrylic lacquers on the market
- Made from only the best quality raw materials, with special ingredients to resist sun-fade, cold-cracking, gas spills & bird droppings

INTERCOAT CLEARS

INTERCOAT CLEAR (SG100)

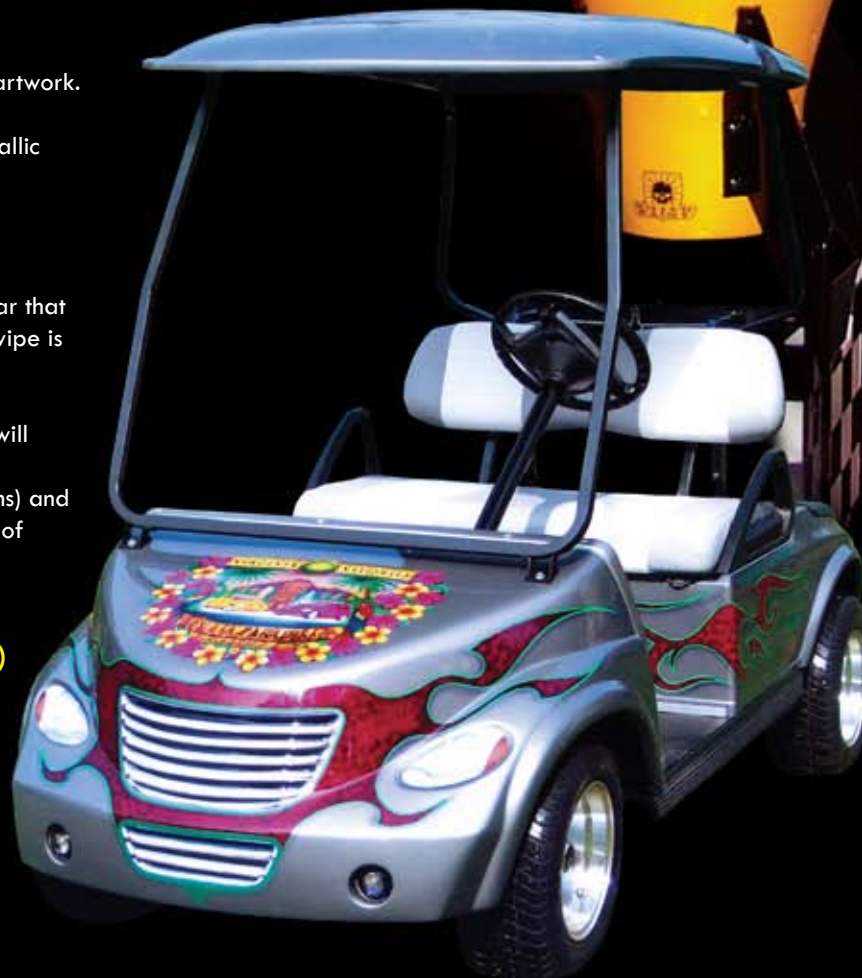

- Custom painters' best friend.
- Designed as a protective immediate clearcoat for artwork, tapeouts on Shimrin Basecoats.
- Prevents tape from marking or disorienting the metallic and splitting when topcoated.
- Carrier for smaller flakes and pearls.

INTERCOAT BARRIER CLEAR (USG100)

- Two-component acrylic urethane base intercoat clear that was designed to offer protection if a light solvent wipe is required, when used for artistic effects.
- With the application of 2 medium coats, USG100 will typically cure in 3 to 4 hours (depending upon shop conditions) and is ready for sanding, tapeouts, and the application of artwork and pinstripes.

INTERCOAT PEARL & FLAKE KARRIER (SG150)

- Basecoat clear that is designed to be used as a carrier for Pearls, Flakes, as well as other dry products offered in HOK range.
- Greatly reduces the settling of Pearls and Flakes after the products are mixed.
- Encapsulates the Pearl & Flake particles, so when sprayed the particles are self orientated & locked into place – reducing blotching & streaking in the finish.

DRY PEARLS & FLAKES

PEARL CONCENTRATES (DR & DP SERIES)

'Hybrid colour morphing accents'

Our specially developed Pearl concentrates are available in dry form. Add to any of HOK acrylic lacquers or urethane enamels, Intercoat Clear, Intercoat Pearl or Flake Karrier to morph your project into a truly hybrid creation.

KOSMIC PEARL (KDP SERIES)

Kosmic Pearls are our newest pearl line that features increased reflectivity, brightness and sparkle. Kosmic Pearls feature high intensity making them a great choice to use over light or dark bases. Try adding Kosmic Pearl in dry form to your clear finish for a dramatic effect.

- View in sunlight for optimum effect.
- Small quantity goes a real long way.

KAMELEON OPAL (KOP SERIES)

Kameleon Opals represent some of the latest advancements in pearlescent and flake technology. These new advancements allow radical colour change from different viewing angles. Available as easy dispersing powders that can be added to our range of Clears, Pearl Basecoats and Marblizer to create dazzling effects & exciting new colours. Available in 8 amazing colours sure to add exciting new effect to your kustom coatings palette.

KAMELEON PEARL (KPF SERIES)

Kameleon Pearls are at the edge of technological advances, offering unique colour changing pigments. Kameleon will actually change colour depending on what angle it is viewed. Rounded, curved surfaces & sharp angles will be highlighted by this unique formulation. Supplied in dry form, they can be added to a selection of HOK Clears & Karriers.

ICE PEARL (IC SERIES)

Ice Pearls surpass all traditional pearls for brightness of colour, transparency and reflectivity. This lies in the glass flake pigment technology that is further accentuated in sunny conditions. Furthermore, blending Ice Pearl pigments will give a truly multi-colour effect – showing each of the colours combined in the pearl. Ice Pearl may be used in conjunction with any of our Shimrin Universal Bases, Kandys, Klears, Marblizers or Kustom Bases.

KOSMIC LONG-GLO (KLG SERIES)

'Fun with the lights off'

Kosmic Long-Glo is a glow in the dark powder additive that can be mixed into any base or Klear. For exceptional results it is recommended that Long-Glo is applied over a white base. Kosmic Long-Glo is fantastic for use in airbrushing & detailing – to add another dimension to your project at night. As with all glow in the dark products, Kosmic Long-Glo has a limited colour fastness in the direct sun, so an overall project is not recommended.

- Use for small parts, graphics for a one-off cool look!
- Carrier for smaller flakes and pearls.

DRY PEARLS & FLAKES

FLAKES (F, MF & UMF SERIES)

'A galaxy of sparkle to inspire you'

Unlike the majority of flakes on the market that claim to be easy to spray – ours really are! Ultra thin polyester makes HOK Flakes the lightest and easy to use. We have a generous variety of colours – even Kameleon Colour Shift Flakes. HOK Flakes are available in 5 flake sizes to create any look or finish. A great retro look can be created using a chunky flake over a contrasting Kandy Basecoat for real head-turning appeal. Or for a subtle shimmer of flake – try Translucent Flakes that allow more of your basecoat to shine through the flake particle.

- Flakes can be added to any of the HOK SG Carriers and Klears.

STRIPING AND LETTERING

STRIPING & LETTERING ENAMEL (U SERIES)

'For a truly unique custom job'

Designed for striping, lettering & airbrush artwork. The high pigment concentration means you can complete most strokes with one pass – single application! Low film build for minimal edging. For a unique retro or rat rod look – this is perfect to transform your project into a one-off. Available in 36 accent colours to highlight your project.

- Apply over existing finishes or topcoat with clear for a smooth durable finish.
- Can be catalysed when topcoat clear isn't required.

SPECIALTY PRODUCTS

ADHERETO® (AP01)

AP01 is designed to use when topcoating Polypropylene, TPO (Thermoplastic Polypropylene), Polypropylene/ elastomer blends, other plastics, aluminium, steel, brass and other metals. Adhereto® creates a bond between a substrate and a coating, or between a dried coating and a fresh (wet) one. This product is also useful when sanding situations are difficult. Adhereto® is easy to use and dries in minutes. Ready to spray right out of the can (no reduction required). Product is clear in colour.

ACCELERATOR (AX01)

Accelerator (AX01) was designed for catalyzed acrylic urethanes and specific polyurethanes to speed up cure time. Use Accelerator to speed dry time in cool shops on parts that must be handled (or sanded for art layouts) or re-coated the same day. Accelerator can be added to any of the following Kosmic Kolor® products: SBS10, UC35, UFC19 and UFC35 Klears; UB and UFB Solid Colours; and UK Kandys.

HI-HEAT BLACK (HH04)

Hi-Heat Black is a fast-covering, great-looking, semi-gloss jet black finish that will endure 760°C (1400°F) without flaking or discolouration. It is a great coating for engine parts or exhaust systems on cars, trucks, motorcycles, small engines, etc. where high temperatures are a concern. Hi-Heat Black comes ready-to-spray with no reduction required. Coated parts are dry enough to handle in one hour without baking.

FLATTENING AGENT (FA01)

Flattening Agent reduces the gloss of our polyurethane enamel topcoats and Klears. Flattening Agent will not affect adhesion or hardness. It is great for under carriages, frames and engine parts where you need a tough, durable finish and low gloss.

KOSMIC KONVERTOR (KV1)

- Converts all House of Kolor basecoats to 3.5 lbs. VOC or less.
- Improves pearl and metallic control.
- Allows you to use your pre-existing materials and equipment.

KOSMIC KANDY KARRIER (UC25)

- Designed for use as an effective carrier for our Kandy Koncentrates.
- Medium solid binder with the same application properties as our Urethane Kandys.
- Excellent clarity, weathering, and ultraviolet resistance.

KUSTOM CATALYST, REDUCERS & THINNERS

CATALYST (KU100)

This product is for use only in our UK Kandys, UB & UFB products. Due to its unique chemistry, KU100 should never be substituted with other brand catalysts.

EXEMPT CATALYST (KU150)

This product is for use only in our Ko-Seal® II, UC & UFC Klears. Due to its unique chemistry, KU150 should never be substituted with other brand catalysts.

FLOW EXEMPT CATALYST (KU151)

This product must be pre-mixed with other products before use. KU151 is a multi-purpose catalyst for urethane finishes, designed for high temperatures, humid conditions, and improves the flow.

REDUCERS (RU310 - RU313 & RU300 VOC EXEMPT)

Our Kosmic Reducers - RU310 Fast Dry, RU311 Medium Dry, RU312 Slow Dry, RU313 Very Slow Dry and RU300 VOC exempt (Fast to Medium) - are the only reducers we recommend for use with our House of Kolor® System.

THINNERS (RU101 & RU202)

Our Kustom Thinners RU101 Hi-Gloss and RU202 Fast Dry are the finest thinners you can buy at any price. The thinner carries the paint to the surface, then evaporates from the paint film, thus how the thinner evaporates will determine the flow, tack free time, consistency, shrinkage, leveling, dry time, tape time and final gloss. A subtle but valuable part of the system!

RETARDER (RU315)

Designed for the Kosmic Kolor® Urethane system to retard dry time in situations where this is deemed necessary, such as force drying. May be added to faster reducers to slow their dry time in emergency situations.

KRATOR ELIMINATOR (KE170)

An additive that corrects fisheye or crater defects. Works with lacquer, urethane, polyurethane, acrylic urethane, acrylic enamel, and other polymer coatings. A must have product for your paint shop.

CAUTION: MAY NOT CORRECT MAJOR SILICONE CONTAMINATION.
